Atoxelene Infusion®

Do you suffer from frown lines, crows feet, expression lines and wrinkles?

Atoxelene Infusion® provides a topical alternative to anti-wrinkle injections without needles or pain!

Atoxelene is a skin smoothing complex that targets expression lines and wrinkles and assists in the prevention of new line and wrinkle formation. The combination of Intraceuticals hyperbaric oxygen technology and a formulation derived from natural amino acids results in visible line smoothing without accompanying paralysis found in some treatments.

It takes just 10 minutes to see the effects of an Atoxelene Infusion®. From the moment you leave the clinic you will notice a visible improvement in your skin's appearance. Skin feels firmer, lines and wrinkles are visibly reduced.

For optimal results a six week course of infusions is recommended. Treatment can also continue at home with the take home product "Atoxelene Line Wand".

Why it works

Atoxelene serum targets the areas of facial muscle contractions to smooth out the appearance of fine lines and depth of wrinkles.

Serum contains antioxidants to fight free radicals and generate healthy cell growth.

Hyaluronic acid and natural amino acids increase hydration and seal in moisture deep into the integral lower layers of the skin.

Atoxelene assists in the prevention of and visibly reduces the appearance of expression lines:
